## Inventing Mobile Apps

Create apps for Android phones:

- ✧ games
- ✧ animations
- ✧ location-aware apps
- ✧ map-based apps
- ✧ quizzes & voting
- ✧ web processing
- ✧ augmented reality
- ✧ social networking

Use Android  
phones from  
the library

**Lectures:** Mon/Thu 1:30-2:40

**Labs:** Wed 11:10-12:20  
or Wed 2:50-4

# Google Hangouts

The image shows a screenshot of a Google Hangouts video conference. The browser window is titled "Google+ Hangouts" and shows the URL [https://plus.google.com/hangouts/\\_/7b7e46a7f576cb4adc9898e045902a1e30d4fc10?authuser=0&hl=en-US](https://plus.google.com/hangouts/_/7b7e46a7f576cb4adc9898e045902a1e30d4fc10?authuser=0&hl=en-US). The main video feed displays a man in a black shirt speaking. Below the main feed is a "People" section with a row of smaller video thumbnails for other participants. The browser's address bar and menu bar are visible at the top. The bottom of the screen shows a taskbar with various application icons and a system tray with the date and time "2012-...31 PM".

# App Inventor Summit

- July 13-14 at MIT
- In attendance:
  - App Inventor Users
  - Teachers using App Inventor
  - Developers
- Presented our progress so far
- Discussed the future of App Inventor

# Our Presentation

- Introduction to App Inventor
- Posting Pictures (OAuth)- Emily
- Blocks to Text- Erin
- Text to Blocks- Karishma
- Data Mining- Johanna

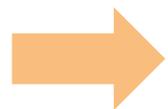

# First App Inventor Dev Team Task

def ? FinalPresInfoList

def ? EditedFinalPresInfoList

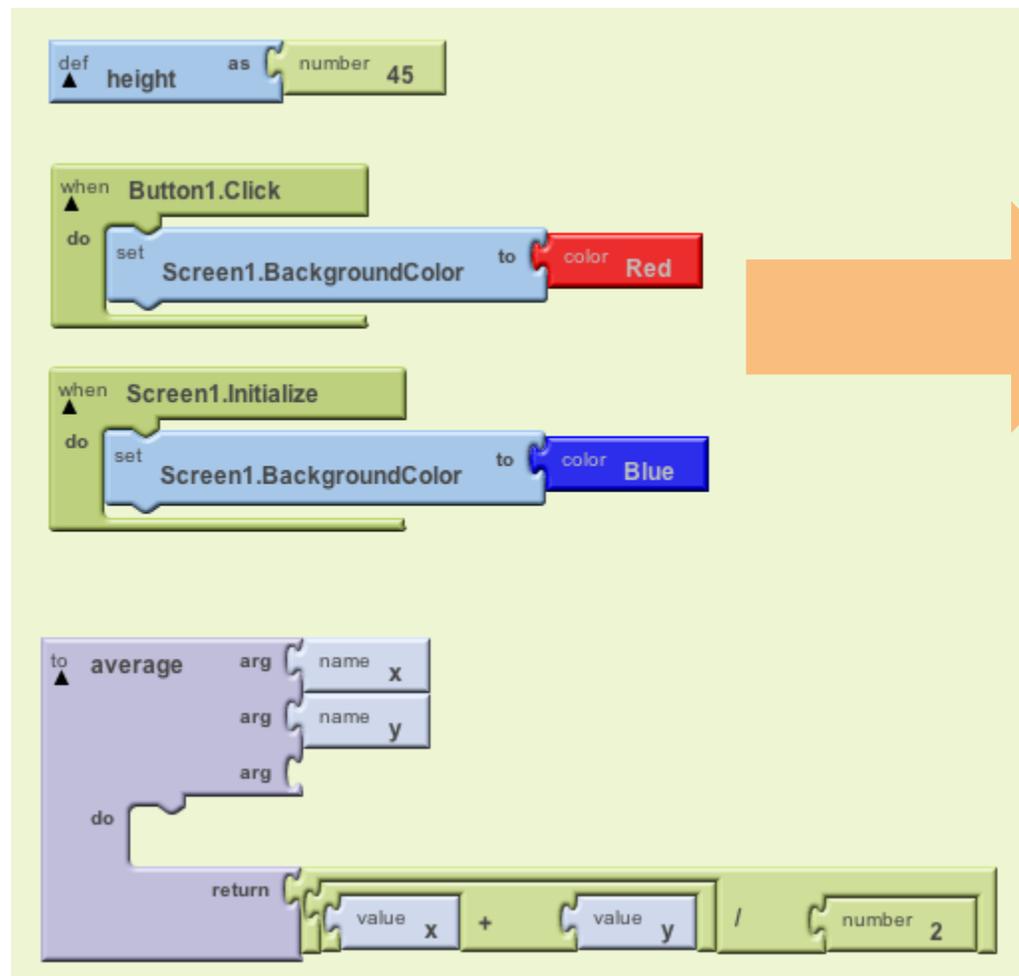

Sample blocks from Sonali Sastry's Tanner Connect Project for CS 117

Who wants to read this??

- Sonali
- Her partner
- Her teacher
- Other people who want to recreate her code

# Our Solution

## TEXT

height = 45

when Button1.Click():

Screen1.BackgroundColor =  
color.red

when Screen1.Initialize():

Screen1.BackgroundColor =  
color.blue

```
fun average(x, y)=  
    (x+y)/2
```

more concise  
searchable

# What should Our Text Language Be?

```
height = 45
```

```
when Button1.Click():  
    Screen1.BackgroundColor = color.red
```

```
when Screen1.Initialize():  
    Screen1.BackgroundColor = color.blue
```

```
fun average(x, y)=  
    (x+y)/2
```

express all of the  
functionality of  
App Inventor

Python-esque syntax

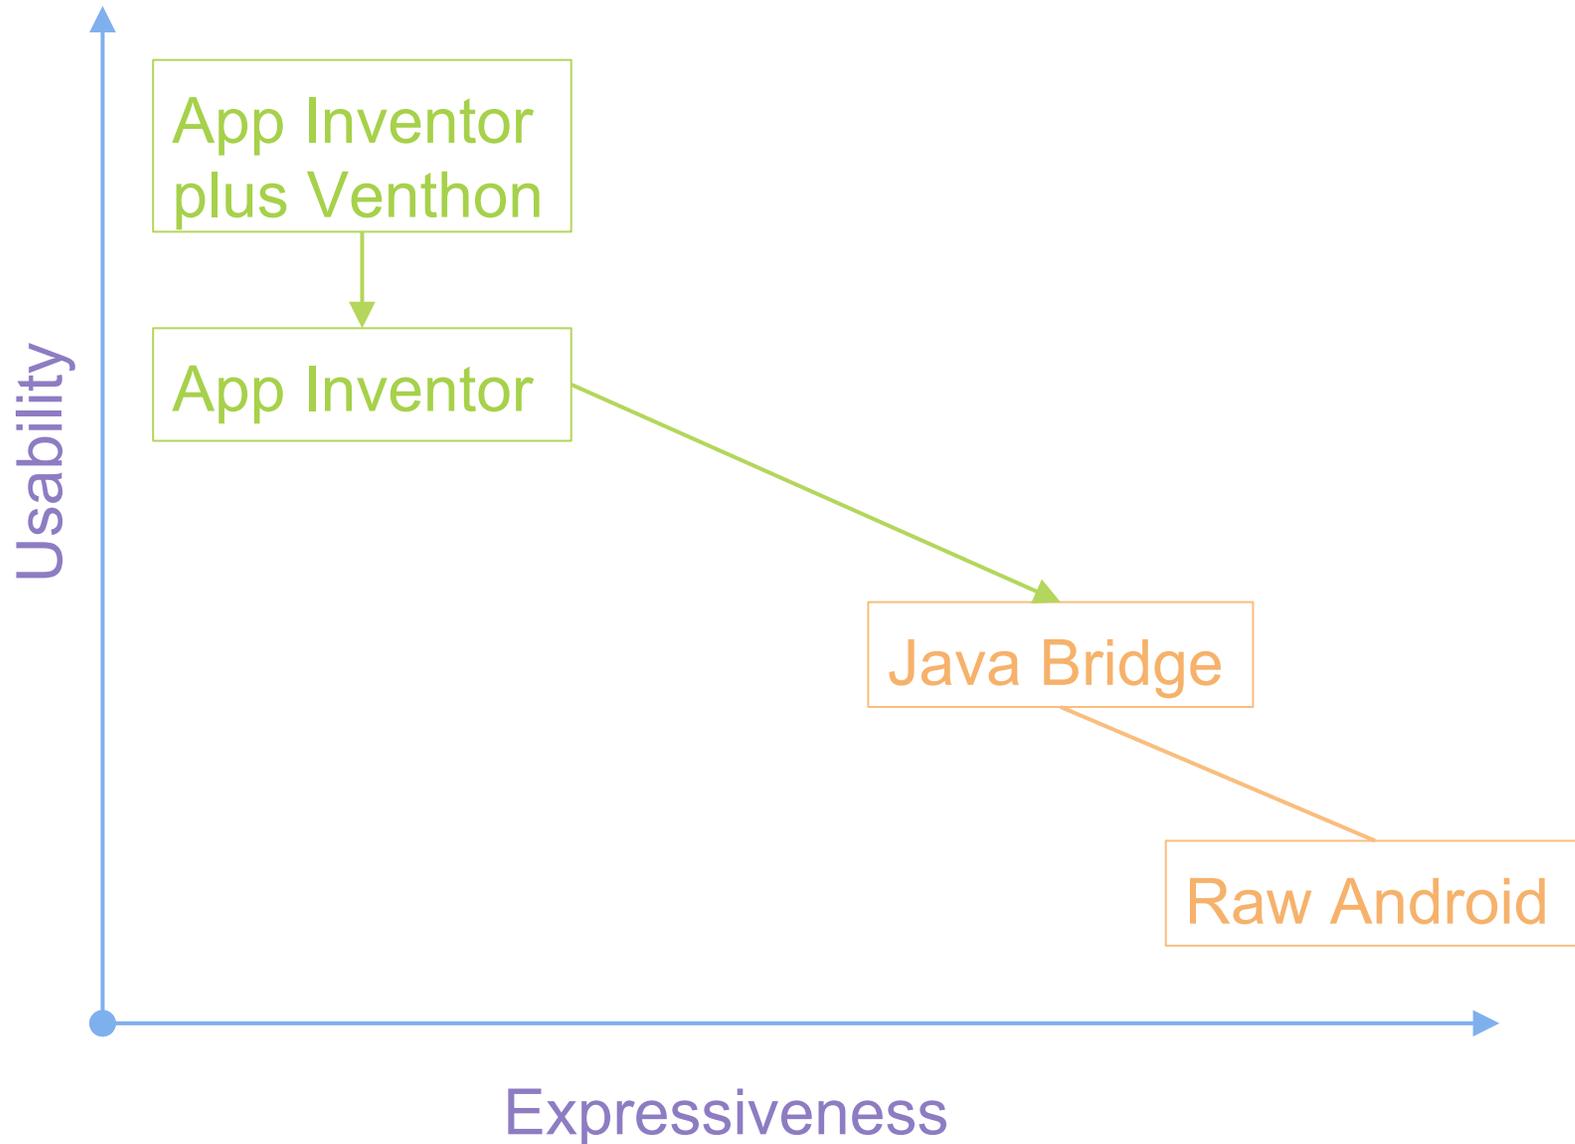

originally proposed by  
Philip Guo at MIT

-fewer syntactic markers  
-indentation used

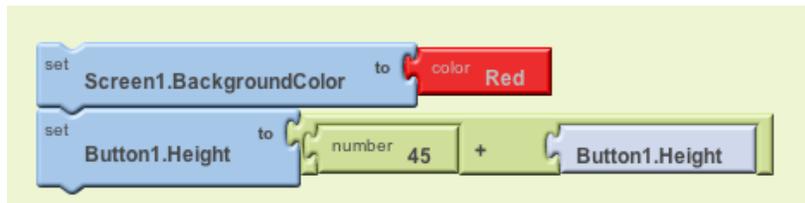

App Inventor +  
Python

could be the first of many  
textual representations of  
App Inventor

# Android Application Creation Languages

```

# Venthon

```
Screen1.BackgroundColor = color.red  
Button1.Height = 45 + Button1.Height
```

## A Small Program

Variable Declaration

Event Handlers

Procedure Declaration

# Comments

- Each block could have a comment on it, nestable block comments.
- We decided to mark comments by  
<| This is a comment. |>
- This could come on the line before a statement block:  
<| This will set the screen to red |>  
Screen1.BackgroundColor = color.red
- Or right after an expression block:  
Button1.Height = (45 + Button1.Height) <| Adding 45 to  
the current height |>

## Back to Sonali's Program

The image shows a complex arrangement of Scratch code blocks. The main logic is organized into several 'when green flag clicked' and 'when button clicked' events. Key blocks include:

- Screen1.Initialize:** A 'when green flag clicked' event that triggers the 'CheckIfList' block.
- CheckIfList:** A block that takes 'ListToTest' as an argument.
- InitialScreenClock.Timer:** A 'when green flag clicked' event.
- Username:** A 'when green flag clicked' event that sets a global variable 'Username' to 'B.GotValue' and calls 'CheckUsernameExistTinyWebDB.GetValue' with the tag '\*all\_tags\*'. It also includes a 'make a list' block and a 'CreateUsernameTinyWebDB.GetValue' block.
- LoginButton.Click:** A 'when button clicked' event that sets 'Username' to 'e', calls 'make a list', and uses an 'ifelse' block to check 'is in list?'. If not in list, it calls 'CreateNewTextBox.Text' and 'ContactNotifier.ShowAlert' with the message 'Sorry, this username is already taken. Please create another one.'. If in list, it calls 'ContactNotifier.ShowAlert' with 'Oops! You haven't typed a username yet.', sets 'Screen Visible' to 'true', and sets 'Username' to 'CreateNewTextBox.Text'. It also includes a 'CreateUsernameTinyWebDB.StoreValue' block.
- SearchListPicker.BeforePicking:** A 'when green flag clicked' event that sets 'SearchListPicker.Elements' to 'global SearchOptionsList' and 'SearchListPicker.Selection' to '='.
- KeywordsListPicker.AfterPicking:** A 'when green flag clicked' event that sets 'SearchResultFusiontables.Query' to 'call QueryKeywords' and 'SearchResultFusiontables.DoQuery'.
- make a list:** A 'def' block that takes 'item' as an argument and returns 'Abstract', 'Keywords', and 'SearchOptionsList'.
- make text:** A 'make text' block that returns a list of text values: 'Select', 'IDNumber', 'from', '2195737', 'where', 'Keyword', 'Quotify', 'm', 'C', 'te', 'C'.

There are also several 'CreateNewTextBox.Text' blocks scattered throughout the code, likely for input fields. A yellow callout box on the left contains the text: '>>Sets Saved Talks and Contacts lists to what the user stored the last time they opened Tanner Connect.' Another yellow callout box at the bottom says 'There is also a notifier that pops up to alert the user'.

## Future Steps

- Adding component information
- Going straight to JAIL instead of through the Java Tree Object

         name: Button1.Height
         sockets: []}]]]]]]
    
```

height = 45

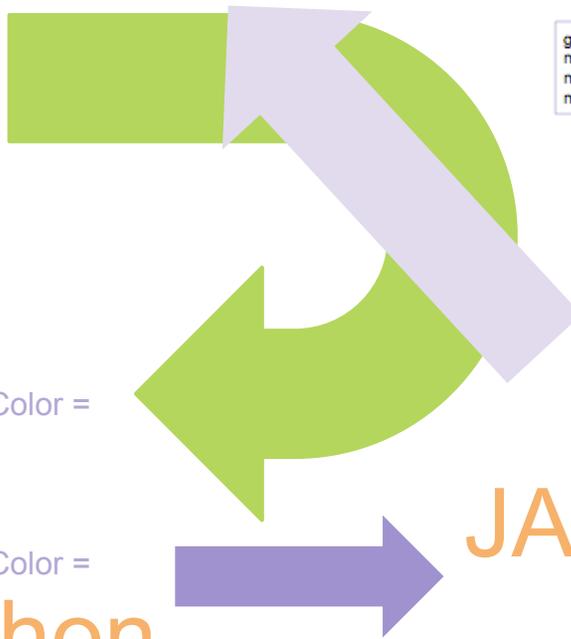

when Button1.Click():  
Screen1.BackgroundColor =  
color.red

when Screen1.Initialize():  
Screen1.BackgroundColor =  
color.blue

fun average(x, y)=  
(x+y)/2

Venthon

JAIL

## For the Future

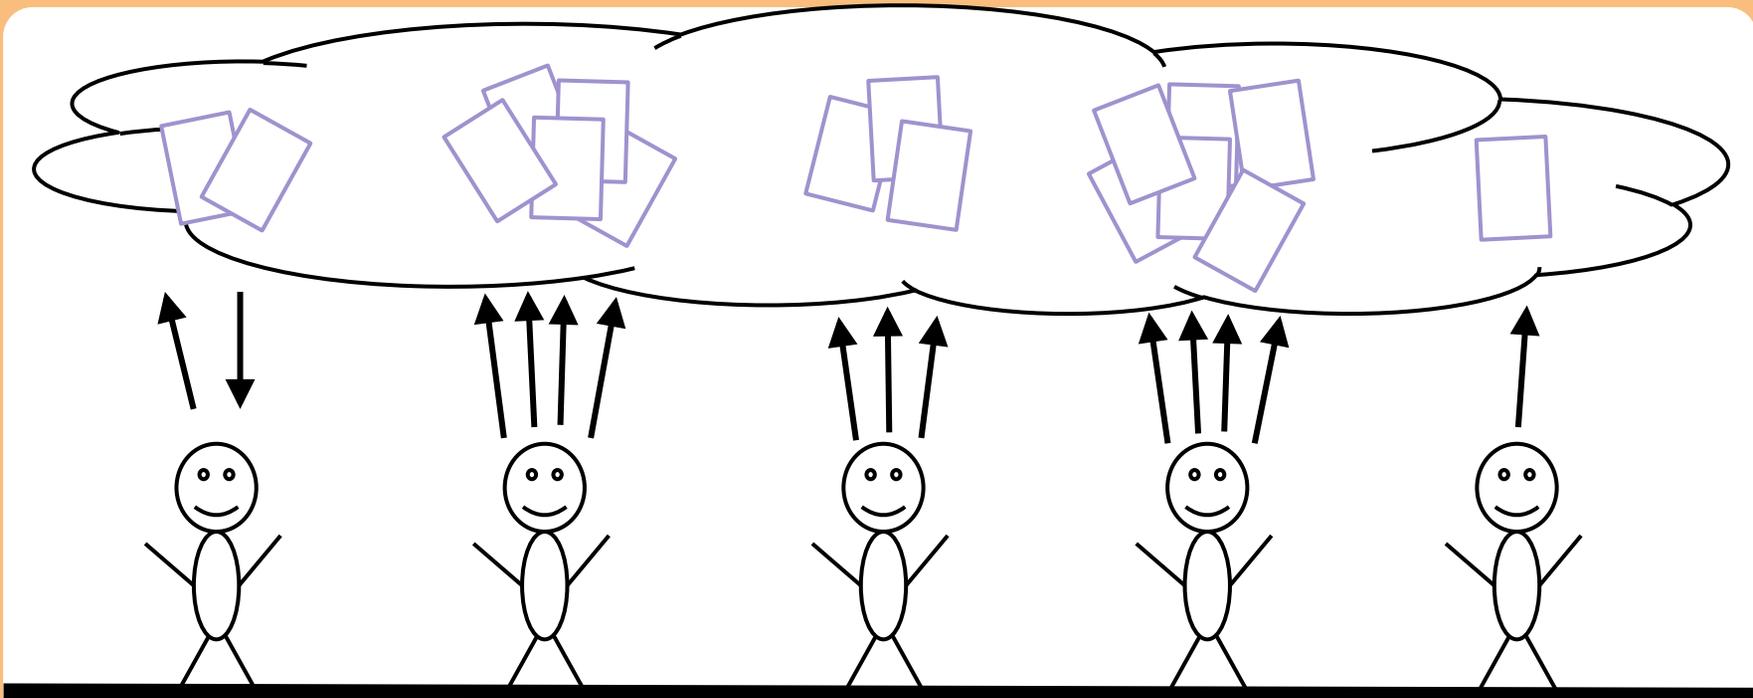

- Converting JAIL to Blocks
- Add another language
  - App Inventor + Java = Venti
- App Inventor is changing
  - We need to adapt to those changes

## The future

- Process all App Inventor files
- Allow everyone to view stats
- Instrument App Inventor so we can track the trajectory of each project
- Allow teachers to track students' progress
- Collect demographic data
- Privacy issues

# Special Thanks
