

Regular Languages

Sipser: Section 1.3 pages 69 - 76

Generalized Nondeterministic Finite Automaton (GNFA)

Theorem. A language is regular if and only if some regular expression describes it.

Proof.
$$(\Rightarrow)$$

GNFA Ground Rules

Converting DFA into GNFA

Add new start state with $\boldsymbol{\epsilon}$ arrow to old start state.

Add new accept state with ϵ arrows from old accept states. Remove old accept states.

Multiple labels on arrow are replaced by union of labels.

Add arrows labeled Ø between states that had no arrows.

After

A Regular Expression for An Old Friend
